## **DETAILED ACTION**

### ***Election/Restrictions***

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-7, drawn to a method for screening DNA sequences encoding proteins.

Group II, claim(s) 8-69 and 111-125, drawn to DNA sequences encoding proteins having the activity of improving environmental stresses, vectors, plants and methods for using said DNA sequences.

Group III, claim(s) 70-106, drawn to proteins having specified amino acid sequences.

Group IV, claim(s) 107-110, drawn to antibodies.

For Group II, Applicant is also required to elect one nucleic acid sequence and its encoded protein from SEQ ID NO: 1-64. For Groups III and IV, Applicant is also required to elect one protein sequence.

There is no disclosed significant structural feature common to all the claimed nucleic acid or protein sequences. Therefore, the nucleic acid/protein sequences of the invention are not so linked as to form a single general inventive concept under PCT Rule 13.1.

There is no technical feature that links the DNAs of Group II and the proteins of Group III or the antibodies of Group IV, since they differ in structure, function and effect. The only possible technical feature in common is that the DNA of Group II encodes the protein of Group III, and the antibody of Group IV is reactive with the protein of Group III. However, such a feature is known and does not define a contribution over the prior art.

The special technical feature of Group I is considered to be screening and selection methods.

Art Unit: 1638

The special technical feature of Group II is considered to be DNA sequences encoding proteins, vectors, transformed plants and plant cells, and methods for using said DNA sequences

The special technical feature of Group III is considered to be proteins having specific sequences.

The special technical feature of Group I is considered to be antibodies.

Therefore, for the reasons discussed above, inventions I-IV are not so linked as to form a single general inventive concept under PCT Rule 13.1.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
